Professional Summary

Production support and automation-focused IT professional with experience troubleshooting bioinformatics pipelines, web applications, Linux servers, and CI/CD workflows. Skilled in Python, SQL, Terraform, YAML, GitHub Actions, Octopus Deploy, and TeamCity, with a strong background in scripting, incident triage, and internal tool development.

Education

Bachelor of Science in Game Development and Programming

Southern New Hampshire University, Manchester, NH

Graduated: July 2024

Certifications

CompTIA Network+

CompTIA Linux+

Professional Experience

Production Support Engineer, DevOps and Platform Support

Official Title: IT Services System Administrator II

ARUP Laboratories Biocomputing

Salt Lake City, Utah

February 2025 - Present

- Triaged and resolved production incidents for NGS service desk requests, bioinformatics pipelines, web applications, and backend services.
- Troubleshot Linux servers, CI/CD workflows, and production database issues using shell commands, Python scripts, YAML files, and SQL queries.

- Built internal CLI tools and automation to reduce manual helpdesk work and streamline common support requests.
- Coordinated escalations and resolutions across developers, bioinformatics, and DevOps teams as frontline production support.
- Managed permissions and access across Azure AD and internal systems.

IT Tier 2 Helpdesk Technician

Advanced Health Care (Larry H. Miller and Company)

Sandy, Utah, US

May 2024 - February 2025

- Troubleshoot issues involving iPads, computers, printers, and user access.
- Used Meraki, CrowdStrike, Tanium, Active Directory, and SplashTop for remote management and endpoint support.
- Managed machine inventory and imaged new employee devices.
- Balanced IT inventory and user auditing projects with daily support requests.
- Followed HIPAA best practices and security procedures.
